**DETAILED ACTION*****Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-29 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6,708,456 B2 in view of CANFIELD et al. (US 4,567,079). The patent '456 contains all the presently claimed features except that it fails to use an adhesive coating on one side of the interply material to secure the roofing product to the roof deck. CANFIELD et al. also relates to roofing materials and teaches a roofing assembly that comprises a roof deck, over which, a plurality of ply sheets are applied and bonded by means of a bonding agent. (Refer to col 2, lines 14-35) It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the roofing composite of the '456 patent and provide with an adhesive coating to secure the roofing product to the roof deck motivated by the desire of providing a mean that will avoid perforating the material by using, for example, a mechanical mean of attachment that are know for producing such effect.
